

AMENDMENTS TO THE CLAIMS

Listing of the claims:

Following is a listing of all claims in the present application, which listing supersedes all previously presented claims:

1. (Currently Amended) A solar cell module comprising
a light incidence side light transmitting member made of a glass containing
at least sodium,

a rear surface member which is a resin film;

a plurality of solar cell elements sealed with a sealing resin between the
light incidence side light transmitting member and the rear surface member,
wherein

the light incidence side light transmitting member is adhered at a light
incidence side of the plurality of solar cell elements by interposing the sealing
resin;

the rear surface member is adhered at a rear surface side of the plurality
of solar cell elements by interposing the sealing resin;

wherein the solar cell element has a p-n junction formed between a p-type
or n-type crystalline silicon substrate and an n-type or p-type thin film amorphous
semiconductor layer; and

~~the crystalline silicon substrate is positioned between the thin film
amorphous semiconductor layer which forms the p-n junction between the
crystalline silicon substrate and the light incidence side light transmitting member~~

~~such that light enters the solar cell element at a side thereof that is opposite the thin film amorphous semiconductor layer~~

the thin film amorphous semiconductor layer which forms the p-n junction between the crystalline silicon substrate is positioned opposite the light incidence side light transmitting member by interposing the crystalline silicon substrate therebetween; and

the light incidence side light transmitting member is positioned at a principal light incidence side.

2. (Previously Presented) The solar cell module according to claim 1, wherein the solar cell element is structured so that light enters from a side of the crystalline substrate.

3. (Cancelled)

4. (Original) The solar cell module according to claim 1, wherein the rear surface member is formed of transparent material.

5. (Original) The solar cell module according to claim 1, wherein the rear surface member is a transparent resin film.

6. (Cancelled)

7. (Original) The solar cell module according to claim 1,
wherein the solar cell element includes an amorphous semiconductor layer in at
least a part of the solar cell element.

8. (Cancelled)
